1:Sanders Z-5,4 (1952-1959) 1962 EH1 Greece EH1

Now and then we find mention of a shop grossing over $5000 a year, but this is exceptional and means that the proprietor has to extend a great deal of credit to take in that amount. Mention could be made here of the yardgoods shops which have come into existence because of the women's desire for the factory-made cotton goods, often of inferior quality. Often they sell beautiful handmade woolen fabrics at ridiculously low prices just to buy the cotton goods which they take to a local dressmaker in order to have a frock in the modern style.

The artisans ply their crafts in small shops, often in full view of those passing on the street. By working near the door or window they take advantage of the daylight and thus use less electricity in their dim ateliers. The list of these artisans for a village in Central Greece reveals much about them and about the Greek village itself:

Two saddlemakers — who are also part-time farmers.

Two blacksmiths — both well-trained skilled laborers owning their own shops.

Two shoemakers — one only repairs shoes, while the other also makes new shoes.

Three tailors — one is exceptionally good, but the others are considered poor in their work.

Four butchers — all have out-of-door shops and kill animals only as needed. Usually one or two sheep are butchered each week. The owners cook the intestines which they sell very readily.

Ten seamstresses — some farm in addition.

Three barbers — one popular, the other two fair. All are located in the coffeehouses.

One horseshoe maker — owns twenty-five stremmas of land, which he farms. (One stremma is one fourth of an acre.)

Four masons — one owns eight stremmas of land which he farms, while the rest own no land. Two of these men are in the small village musical group which plays at all weddings and festivals.

Five cart owners — who earn a living by transporting products.

This random presentation of the services found in eight Greek villages scattered over Central and Northern Greece provides a quick introduction to, rather than any conclusive statement about, the business activity going on around the village square.

Telephone and electric poles indicate whether these two utilities are available locally. There is usually only one telephone, either in the office of the gendarmerie, the local community council, or a centrally located café. Should the village be one of those favored with electricity, the peasants proudly inform the visitor of that fact. When we asked what the advantages of electricity are, we got various replies: "Electricity brings cleanliness. We used to have smelly kerosene lamps." "Now we can light the streets and see where we walk in the evening." "We can have radios and learn what

491 457 At times, one comes across an unusually good road system in what would at first seem to be an isolated area and learns, as in the case of the area south of Volos, that emigrants from these communities, who went to Egypt, sent back large sums of money for the construction of these roads, which were built at heavy cost per kilometer because of the great amount of masonry work needed. Near Xourichti, in this same area, we 443 came across a small unpadlocked building on the main road connected by a path with the village seen in the distance. We learned that this was the place where villagers left their money and orders for purchases desired from Volos. When a truck driver passed that way he would stop, pick up the money and the orders, and do the necessary shopping in Volos. When he came back he would leave the purchases in the little house, perhaps toot his horn or flash his lights, and people from the village would come to get [577] their new possessions. There were no thefts, no shortchanging, in this area of mutual trust where, before World War II, it was safe for a young woman to walk anywhere through the mountains at night unattended.

491 178 In Epirus, across Greece from this Volos area, life is lived in a different historical and physical setting. In order to learn what effect a new road had upon village people there, we went to the village of Tsepelovo. On August 20, 1952 — only a few months prior to our visit — the first automobile had arrived at the village, using the road that had been built to open up a large forest to be exploited for the people's benefit. As we sat in the office of the community council and talked to the village secretary, we learned what the road had already accomplished for this village. The [494] first advantage mentioned was the lowered transportation costs, for the [804] hauling charges per oka (2.8 pounds) by truck are only one fifth or one fourth of those by donkey. When pressed to give other results, the secretary put it this way:

[342] Now we can build homes with sand and cement; formerly it was too expensive to carry these in by animals. Formerly we built our stone houses with lime and mud as mortar, and that is why they tend to crumble so quickly. [438] Here we produce about 14,000 okas (about 20 tons) of walnuts each year. We received little for them because of the transportation charges; now the merchant comes here in a truck and pays us cash and gives a higher price. Today we can also sell our lumber because, before the road came, we couldn't very well strap long boards to the donkeys.

[484] We used to spend twelve-and-a-half hours going by animal to Ioannina, the only large city nearby. Now we do it in two-and-a-half hours by car. The grocer [735] can sell fresh goods, whereas formerly he had only staples. Although we had great riches here, we also had great poverty so that beggars would go from house to house. The road reduces this inequality. Many of our men who had no other income earned much money working on the construction.

[758] In case we get sick we can be carried down by car and not have to ride a donkey.

Vasilika

parents have carefully prepared for them, is a form of pleasure so well recognized that there is a specific verb to express it: *kamarono*.

The economic activities of the family through which its members actually carry out a large part of their obligations are usually conducted by an entire household. A household in Vasilika, however, is neither limited to nor does it always include a husband and wife and their children, that is, a family. This is a result of the operation of the marriage, dowry, and inheritance system in the region (to be discussed fully in Chapter 4), and of unpredictable specific circumstances. Here it is sufficient to say that in 1961, of Vasilika's fifty-one households, twenty-six were composed of the elementary family; eight, in addition to the parents and their children, included the widowed mother of the husband; seven had a husband and a wife living alone; and three included one married son and his wife and children living in the same house with his father and mother and unmarried brothers and sisters. Of the remaining seven households, each had its own unique composition because of recent deaths in the family or other special circumstances. Whatever the particular situation, however, no Vasilika household includes anyone who is not a kinsman, nor indeed any adults outside the kinship range of parents, their grown children, or adult brothers and sisters.

Of the fifty-one households in Vasilika, thirty-five are headed by farmers who own some land. Although, for various reasons, these farmers are not all equally dependent on their land holdings for their total subsistence and income, their round of life as independent working farmers is one important expression of the aims and obligations of their families. The yearly round of agricultural activities is devoted principally to the production of grapes for wine, wheat for bread, and cotton and tobacco for cash. The farming households also engage in subsidiary activities which contribute to the production and processing of the main crops, and which add to the food supply and income of the households.

## Major Crops

The first event of the agricultural year is the pruning of the grape vines. Since grapes are not a commercial crop, each farmer devotes only one or two *stremata* (four *stremata* equal one acre) to viticulture. Wine is made and consumed at home, and each farmer aims to produce only enough grapes to keep him in wine for a year. Pruning of the grape vines starts after the winter rains have abated and the early spring sun appears. Only two or three "eyes" are left on a vine, and the cuttings are carried back to the storehouses to be saved for use as fuel for spit-barbecuing the Easter lambs. Again, as we have seen, farmers are particularly conscious of fatigue in the course of the three or four days it usually takes to do the pruning. Palms have softened over the winter, the wooden handle of the pruning hook raises blisters, and the unaccustomed stooping and pulling motions cause backaches. After the pruning, deep hoeing is done to pile the earth around the short, stout vines. The work is done with a long-handled heavy hoe and, in Vasilika, is considered man's work, as is the pruning. Since the two

Vasilika

period of at least two months. Women are again hired to do the job. But this time, the women from Vasilika and from the neighboring villages who had been free to do the hoeing are not necessarily free to spend away from home the prolonged period required for picking. The local women can and do hire out when they are free, but they can be free only sporadically, for their own fields also need some attention every day, even if their cotton production is not extensive. Therefore, the intermittent wage labor of the neighborhood women is augmented by labor from more distant regions where no cotton is grown, and where the early fall is therefore a slack season in the agricultural cycle. In 1955, six Vasilika farmers took the train to Trikala (near Larissa) and brought back with them thirty women who then worked in Vasilika for almost two months. Each of the farmers took responsibility for five or six women; he paid their round trip fare, put them up in his home, and furnished them with food. As a net wage, he paid them for picking the cotton in his fields one to two drachmas per *oka* (one *oka* equals two and eight-tenths pounds) of cotton picked. A serious, mature worker can regularly pick about forty *okadhes* a day.

In the picking season the farmer's main concern is to finish the job before the winter rains set in. If prolonged rains come early, the value of the cotton is lowered, and the processing of it involves additional expense. If the cotton has to be picked while it is still damp, it must be picked with the pod, and later must be separated from the pod by hand. The farmers paid hired workers a drachma per *oka* for the job.

While the women are picking cotton, the men of the household weigh the filled bags, keep records of the amount each woman picks, and use the horses, donkeys, or mules to haul the cotton from the fields. It is stored in the stone barns, in the lower storage rooms of the houses, and, as a matter of fact, when other space is no longer available, in any room in the house. Trucks from the cotton gins in Levadhia come through the village and collect the cotton. Farmers keep track of the weight of cotton they send to be ginned but do not identify their own sacks. The ginning costs six percent of the original weight of the cotton, a percentage which the gin owner keeps for himself. The farmers use the seed returned to them for the next year's planting, and also have some of it pressed into cakes for use as supplementary fodder for the ewes at lambing time. The cotton itself is again stored in sacks to await sale to merchants who visit the villages. During the season, the cotton is also used as a medium of exchange. Itinerant vendors selling fish or oranges, for example, are willing to take raw cotton instead of cash in payment.

The price at which the farmers sell the cotton to the merchants is never high enough to satisfy the farmers, who feel they get a disproportionately small share of the ultimate value of the cotton. We were once host to some urban visitors and to some of the village's leading men. In the course of the afternoon a heated and eloquent discussion on cotton prices developed. The farmers contended that by the time they paid the costs for machinery, fuel, hired labor, and calculated, in addition, the value of the labor of the members of their households, they made scarcely any profit at all on the cotton. The visitors, on the other hand, insisted that it was wrong to include the labor of their households as part of the

to fight the disease after it appeared rather than to cure the source of the disease. 744

The main causes for the death of children were the irregular feeding, intestinal diseases, malaria, lack of nutritive food and long hours of work of the parents that caused them to neglect their children. 164 165

Due to the cost of medicine the people called the doctor only when it is too late for him to do anything. "It was the will of God to give and take." This is the usual answer that one would hear. The cost of medical bills range from $12 to $35, even though the local doctor is free of charge. 758 [777] [511]

/43/ The care of the aged rests solely on their sons. According to tradition the aged are the head of the family until they die and due care and respect should be paid to them so as to get their blessings before their death. The aged who are unable to do any kind of work are cared by their closest relatives. It is a part of their religious duties to respect and care for the aged. 888 593

PART III.

Earning of Living. The farming is a subsistence type of farming. The people barely make their living and on lean years they have to borrow heavily from the Agricultural Bank or from the local city merchants. The following inventory which was taken from a representative farmer shows more or less the farm enterprise. 241 511

fuss and disturbance. Efficiency can usually be found when it is not a conscious end.

To introduce an awareness of time into a meal is particularly abhorrent to Greeks, though this has to be done where factories set time limits. Dinner is served when it is ready, and without regard to efficient consumption. The fish is not fileted, the nuts are not shelled, the fruit is not sliced. The eater will spend a long time removing infinitesimal bits of flesh from the head of a small fish. All this is part of the process of eating, which is more than the naked act of consumption. He will end his meal with an orange which he will peel with virtuosity, leaving the peel in one piece; to consume an orange in the form of juice is to take all the meaning out of the act.

Greeks in the city, in some circles, find the need of hurry entering their lives. They are not at home with it. For the Greek traditionally, to work against time, to hurry, is to forfeit freedom. His term for hurry means, originally, to coerce oneself; and a visitor arriving out of breath may say: "I have hurried," but the form in which the word is more often used is "Don't hurry." One does not admonish another to coerce himself, and a mother does not constantly ask her child to hurry up, unless perhaps she is following the new books on child training which say that a baby must not be allowed to set his own pace. But a Greek has other linguistic ways of expressing expeditiousness. There is the gentle hint: "Won't you make speed?" There is the reassuring "I have finished," meaning "I am coming to the end as fast as I can," and there is the urgent call for help: "Arrive!"

There are many clocks and watches in Greece now, both in the city and the village. Watches are an important part of a man's trappings, and of a girl's adornment. Clocks are necessary to complete the furnishing of a house. It is not essential as a rule that they keep good time, or that they run at all. If they are in good running order, and are in use, their function is one of reference; they do not shape the household life. They give information and satisfy curiosity; they do not tell the wife that it is now time to start cooking or serve the meal. However, there are exceptions to this, particularly among the few mothers who follow the child training directions for rigidly scheduled feedings and bedtime. Villagers speak of hours and minutes, but these are merely references to the passing of time, rather than its measure. Visitors, asking how far it is to the next village, find that "five minutes" may mean half an hour or two hours, but they find that the answer "A cigarette away" does provide an accurate measure.

In spite of the prevalence of timepieces, the church bell and the school bell, and even a cannon blast, continue to have active functions in calling adults or children to pre-arranged gatherings or communal village work. Even in the cities, people are called "Englishmen" when they turn up on the dot at meetings or appointments. People often arrive an hour late to an appointment to find that the other
